DETAILED ACTION

Allowable Subject Matter

Claims 9-16 are allowed.

The following is an examiner's statement of reasons for allowance: The closest prior art reference Ono discloses a signal source 1, compressor (memory) 11, transmit data create circuit 12, address generation circuit 13, sending circuit 14 and light emitting part 15. Compressor (memory) 11 reads on a memory for temporarily writing digital audio signals inputted thereto and for repeatedly implementing time axis compression processing every unit time period to the written digital audio signals to write and read them for a second time as described in paragraph 13, whereby the memory is inherent. Paragraph 14 stipulates that the sending circuit 14 accomplishes modulation which reads on a modulation circuit. Light emitting part 15 reads on an infrared light emitting element. Ono does not disclose nor suggest the use of a compression circuit for implementing compression to the digital audio read out from the memory. While there is time axis compression, the signal is not further compressed, which is the allowable feature found in independent claim 9. With regard to claim 13, Ono does not disclose a demodulation circuit, memory, and an expansion circuit in a reproducing apparatus.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
